Attn: TSCA - Section 8 (e)

Ref: Diallyl Disulfide (DADS)

Contains No CBI

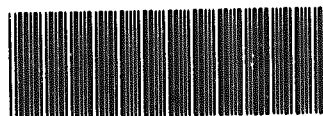

Dear Sir/Madam:

Platte Chemical Co. (Platte) reports that the developmental compound, DADS, has been found to be a contact sensitizer in guinea pigs, a moderate irritant to the ocular tissue of rabbit, and a severe irritant to the skin of rabbit. DADS is a naturally occurring component of Allium crops such as garlic and onions. For at least ten years prior to Platte becoming involved with DADS, the material has been experimentally tested by numerous research personnel through out the world and there have been no reported adverse effects, to our knowledge, on human health or the environment.

If you have any questions or need additional information, please contact me at your convenience at (970) 356-4400.

Respectfully,

Bruce D. Riggle
